Abstract. The subfamily Phlebotominae is represented by insects commonly known as sand flies widely distributed in tropical and subtropical regions, with the Neotropical region having the greatest diversity. Only New Zealand or the Pacific Islands, excepting New Caledonia, do not present records. One means of access to the more than 1,060 described species is through the specimens deposited in biological collections, and the availability of associated data on online platforms for consultation on the part of students and researchers. This being the case, this study aimed catalogue the sand flies deposited in the Invertebrate Collection of the MZUSP (University of São Paulo Museum of Zoology). Twenty-nine species designated as type material were found being of nine holotypes, one “allotype” and 90 paratypes described from five countries in the Americas: Panama, Honduras, Jamaica, Mexico, and Brazil. In addition to these, 1,346 non-type specimens, from 12 Brazilian states, are deposited in the collection and have been included here in list form. The MZUSP sand fly collection currently houses specimens from 152 species, which represents 28% (546) of the Phlebotominae fauna of the Americas.

Keywords. Scientific Collections; Sand flies; Biodiversity; Leishmaniasis.

INTRODUCTION

Sand flies are dipterans belonging to the family Psychodidae and subfamily Phlebotominae, responsible for transmitting several pathogens, including parasites of the genus *Leishmania* (Lainson & Rangel, 2005). There are 1,060 known species of Phlebotominae worldwide, with 53% (546 specimens) already recorded in the Americas, of which 297 (54%) occur in Brazil (Shimabukuro *et al.*, 2017; Andrade *et al.*, 2020; Galati, 2023; Galati & Rodrigues, 2023). According to

Galati (2018) classification, there are 23 genera, of which *Bichromomyia*, *Lutzomyia*, *Migonemyia*, *Nyssomyia*, *Pintomyia*, *Psychodopygus* and *Trichophoromyia* can be important in the transmission of *Leishmania* to mammals (Maroli *et al.*, 2013; Akhouni *et al.*, 2017). The diversity and abundance of sand flies are closely connected to abiotic factors as temperature, humidity, precipitation, the biome, availability of organic material and of food sources (Quaresma *et al.*, 2012; Oliveira *et al.*, 2013; Parham *et al.*, 2015; Peterson *et al.*, 2017). In Brazil, due to the environmental condi-

tions that favor the development of these insects, their presence is observed in forest, rural and urban environments (Almeida *et al.*, 2010; Silva *et al.*, 2011).

Sand flies can be found in institutional collections (Santos *et al.*, 2014; Adams & Shimabukuro, 2018, Andrade-Filho *et al.*, 2022), including the named type-series, composed of the type specimen which is the example from which the taxon was described (ICZN, 1999). Brazil boasts seven scientific collections that house type specimens of the Phlebotominae: (I) "Coleção de Flebotomíneos do Instituto Evandro Chagas" (ColFleb IEC); (II) "Coleção de Flebotomíneos" (FIOCRUZ/COLFLEB); (III) "Coleção de Entomologia Médica da Faculdade de Saúde Pública da Universidade de São Paulo" (FSP-USP/SP); (IV) "Coleção de Invertebrados do Museu de Zoologia da Universidade de São Paulo" (MZUSP/SP); (V) "Coleção de Invertebrados do Instituto Nacional de Pesquisas da Amazônia" (INPA/AM); (VI) "Coleção Entomológica do Instituto Oswaldo Cruz" (CEIOC/RJ) and (VII) "Coleção Entomológica dos Instituto Butantan" (IBut/SP). In addition to these, it is possible to obtain information on types of Phlebotominae in collections abroad (Adams & Shimabukuro, 2018).

Among the above-mentioned collections, MZUSP houses the most important collection of Neotropical Diptera, including types, and is thereby characterized as the major collection of this group in Latin America. It currently comprises around 550,000 dried mounted samples and around 500,000 samples of entomological material preserved in wet method (MZUSP, 2021). Faced with the importance of the collections for the preservation of biodiversity, and of sand flies, regarding health, we catalogued the material type and listed the non-type specimens of Phlebotominae (Diptera: Psychodidae) deposited in the MZUSP collection. Associated data may be found in SiBBr (<https://collectory.sibbr.gov.br/collectory/public/show/co116>) and GBIF (<https://www.gbif.org/pt/publisher/c461e0ec-aaa8-4601-bae9-4b08d6e804f1>).

METHODS

Previous information contained on the permanent slides deposited in the MZUSP collection was annotated and photographed, followed by a verification of the original descriptions found in the literature. The catalogue contains the information on these descriptions (specimen name, locality, collection method, date, and collector/legit) keeping all of the original information in the labels. The condition of the specimens was observed. The nomenclature of the types in this catalogue and the geographical distribution of the species are following Galati (2018). This catalogue was devised and organized according to previous research on other groups of insects, including sand flies (Santos *et al.*, 2014; Adams & Shimabukuro, 2018; Falaschi *et al.*, 2020; González *et al.*, 2021). The other species of Phlebotominae (non-type) deposited in the collection are listed in the Supplementary Material.

The maps were devised in the QGIS program, version 3.20.2 (QGIS, Development Team, Open-Source Geospatial Foundation OSGeo). The maps represent the record for each specimen using the geographical coordinates of the localities mentioned in the labels on the deposited slides.

The types listed are arranged in alphabetical order of genus and divided according to subtribe, using the following format:

SUBTRIBE

Binomial name Author(s) and date of description.

Journal or Technical Bulletin, Volume(Issue): Pages.

Material examined: Typology, number of specimens and sex. The information was taken from the labels of the slides deposited in the collection, without any kind of modification.

Original name: Specimen name as identified on slide.

Type-locality: Country, City or County and State.

Geographical distribution by country and in Brazilian states in parentheses.

Additional note: For some species: Information present on the original labels was highlighted, such as the taxonomic status, and medical importance.

Abbreviations used in the catalog below:

Loc. Coll.: Collection Site.

Leg.: Legit.

Date Coll.: Collection Date.

Met.: Collection Method.

Det.: Determiner.

Date ID.: Date of specimen identification.

RESULTS

The MZUSP collection houses 1,446 specimens of sand flies, included in 152 species, distributed in the subtribes Brumptomyiina (16 species), Lutzomyiina (62 species), Sergentomyiina (14 species), Psychodopygina (59 species) and undetermined subtribe (1 species). The origin of the type species includes five Latin American countries and eight Brazilian states (Fig. 1). Non-type specimens from the collection include eight Latin American countries and 12 Brazilian states (Fig. 2). This catalogue presents information on types of 29 species of Phlebotominae, deposited in the Diptera collection at MZUSP. Data on type-species was incorporated into the Taxonomic Catalog of Brazilian Fauna (<http://fauna.jbrj.gov.br>).

Information on the species of the collection of type material: **PHLEBOTOMINAE**.

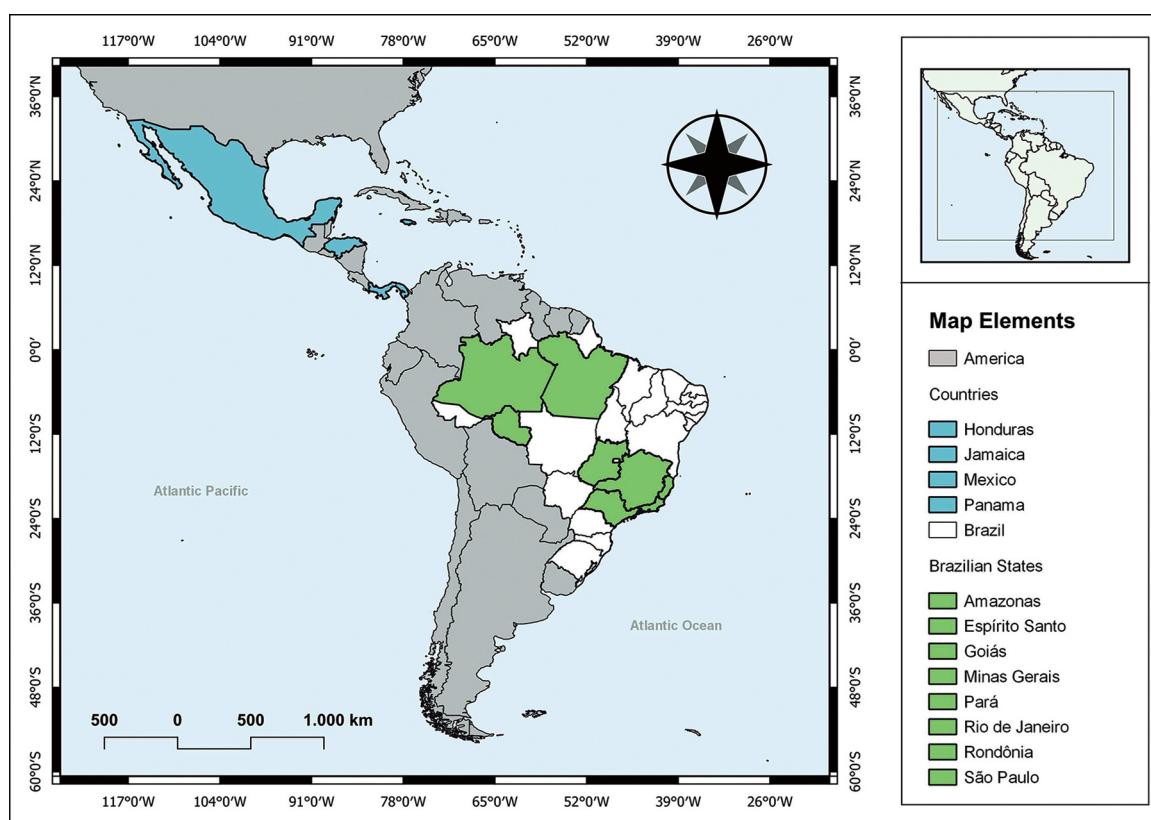

Figure 1. Map of Latin America with the origins (countries) and Brazilian states of the specimens types of sand flies deposited in the Invertebrate Collection of the Museum of Zoology of the University of São Paulo (MZUSP/SP).

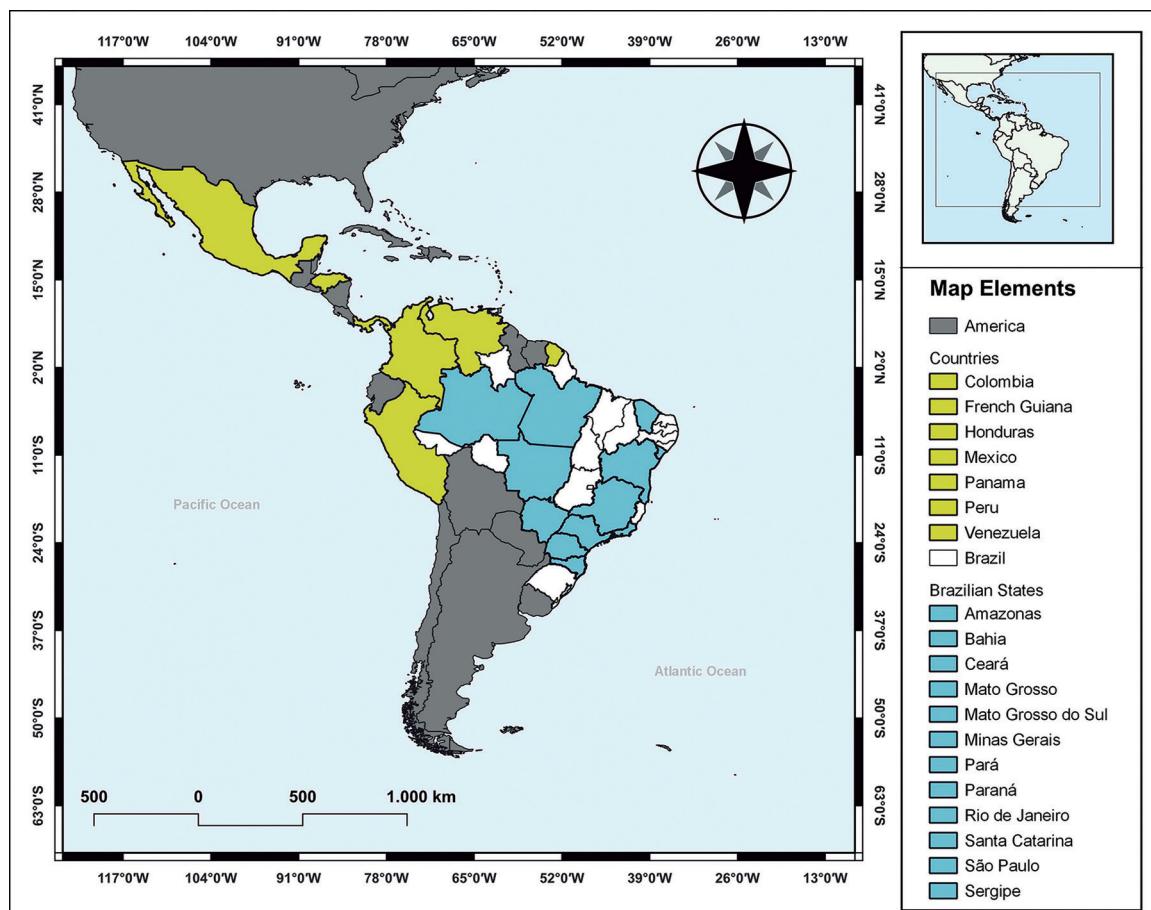

Figure 2. Map of Latin America with the origins (countries) and states of Brazil of the specimen non-types of sand flies deposited in the Invertebrate Collection of the Museum of Zoology of the University of São Paulo (MZUSP/SP).

Subtribe BRUMPTOMYIINA

Brumptomyia guimaraesi (Coutinho & Barreto, 1941)

Papéis Avulsos do Departamento de Zoologia, 1: 177-192.

Examined material label information: *Brumpt. guimaraesi*
Cout. & Bar.; **paratypes:** 2♀♀ || Itaporanga || São Paulo ||
Brazil || Met. in light || Leg. Coutinho || Date Coll. 12-1940.
Paratype: 1♀ || Itaporanga || São Paulo || Brazil || Loc. Coll.
Lab creation || Leg. not informed || Date Coll. not informed.

Type-locality: Brazil, Itaporanga, São Paulo.

Geographical distribution: Colombia, Argentina, Paraguay, Brazil (Minas Gerais, Espírito Santo, Rio de Janeiro, São Paulo, Distrito Federal, Paraná).

Additional note: The slide of the female does not have information about the collector and date of collection, since that the specimen is from laboratory rearing. The species was renamed because it was misspelled (Coutinho & Barreto, 1941).

Brumptomyia dasypophila Barreto, 1964

Ciência & Cultura, 16(2): 156-157. Resumos das comunicações à XVI^a Reunião Anual da SBPC, 1964.

Examined material label information: *Brumpt. dasypohila* Barr. 1962; **holotype:** 1♂ (MZ006761) || Cássia dos Coqueiros || São Paulo || Brazil. **Paratype:** 1♂ (MZ006760) || Cássia dos Coqueiros || São Paulo || Brazil.

Type-locality: Brazil, Cássia dos Coqueiros, São Paulo.

Geographical distribution: Brazil, Ribeirão (São Paulo).

Additional note: The locality on the slide label reads "Coqueiros S.P. Toca de Tatú. Albertin, 2-52 Leg.". Hol. ♂ MZ006761, Par. ♂ MZ006760. These specimens were reidentified as *Brumptomyia cunhai* (Mangabeira, 1942) by Galati in 1992 and noted in the slide. Based on Galati (2023) *Brumptomyia dasypohila* is as valid species and is closed with *Br. guimaraesi*.

Subtribe LUTZOMYIINA

Dampfomyia viriosa (Fairchild & Hertig, 1958)

Annals of the Entomological Society of America, 51(6):
509-516.

Examined material label information: *Phlebotomus viriosus* F. & H.: **Paratype:** 1♂ || Almirante || Bocas || Panama || Loc. Coll. Rock cavity || Leg. W. Hills || Date Coll. 05-12-1952.

Type-locality: Panama, Almirante, Bocas.

Geographical distribution: Costa Rica, Panama.

Evandromyia (Aldamyia) piperiformis Godoy, Cunha & Galati, 2017

Journal of Medical Entomology, 55(1): 128-136.

Examined material label information: *Evandromyia (Aldamyia) piperiformis*. **Holotype:** 1♂ || Porto Velho || Fazenda 2 Irmãos || Rondônia || Brazil || Place and/or collection method not informed || Leg. Correia W.P., Souza A.F. Oliveira G.H. || Date Coll. 04-04-2016 || Det. Godoy, Cunha & Galati || Date ID 2017. **Paratypes:** 11♂♂ || Porto Velho || Fazenda 2 Irmãos || Rondônia || Brazil || Place and/or collection method not informed || Leg. Correia W.P., Souza A.F. Oliveira G.H. || Date Coll. 04-04-2016 || Det. Godoy, Cunha & Galati || Date ID 2017. 10♀♀ || Porto Velho || Fazenda 2 Irmãos || Place and/or collection method not informed || Leg. Correia W.P., Souza A.F. Oliveira G.H. || Date Coll. 04-04-2016 || Det. Godoy, Cunha & Galati || Date ID 2017. **Paratypes:** 9♂♂ || Porto Velho || Sítio Santo Antônio || Rondônia || Brazil || Place and/or collection method not informed || Leg. Correia W.P., Souza A.F. Oliveira G.H. || Date Coll. 10-22-2015 || Det. Godoy, Cunha & Galati || Date ID 2017. **Paratypes:** 8♀♀ || Porto Velho || Sítio Santo Antônio || Rondônia || Brazil || Place and/or collection method not informed || Leg. Correia W.P., Souza A.F. Oliveira G.H. || Date Coll. 10-22-2015 || Det. Godoy, Cunha & Galati || Date ID 2017.

Type-locality: Brazil, Porto Velho, Fazenda 2 Irmãos, Sítio Santo Antônio, Rondônia.

Geographical distribution: Brazil (Rondônia, Pará, Goiás, Mato Grosso).

Evandromyia inpai (Young & Arias, 1977)

Acta Amazonica, 7(1): 59-70.

Examined material label information: *Lutzomyia inpai* Young & Arias, 1977. **Holotype:** 1♂ || Manaus || Amazonas || Brazil || Met. Disney (Hamster) trap || Leg. Freitas & Vidal || Date Coll. 10-21-1975. **Allotype:** 1♀ || Manaus || Amazonas || Brazil || Met. Disney (Hamster) trap || Leg. Freitas & Vidal || Date Coll. 10-21-1975.

Type-locality: Brazil, Manaus, Amazonas.

Geographical distribution: Venezuela, Brazil (Roraima, Amapá, Amazonas, Rondônia e Pará).

Lutzomyia botella (Fairchild & Hertig, 1961)

Annals of the Entomological Society of America, 54(2):
237-255.

Examined material label information: *Phlebotomus botellus* Fairchild & Hertig, 1961. **Paratype:** 1♂ || El Volcán de Chiriquí || Panama || Met. light trap || Leg. Blanton || Date Coll. 03-23-1954.

Type-locality: Panama, El Volcán de Chiriquí.

Geographical distribution: Panama.

Lutzomyia castroi
(Barreto & Coutinho, 1941)

Papéis Avulsos do Departamento de Zoologia, 1(24): 143-158.

Examined material label information: *Phlebotomus castroi* Bar. & Cout., 1941. **Holotype:** 1♂ || Itaporanga || São Paulo || Brazil || Met. in light || Leg. Coutinho || Date Coll. 12-1940.

Type-locality: Brazil, Itaporanga, São Paulo.

Geographical distribution: Brazil (São Paulo).

Additional note: Material originally deposited in the collection of the "Faculdade de Ciências Farmacêuticas de Ribeirão Preto" (FCFRP) and incorporated in the MZUSP collection by Andrade *et al.* (2013).

Lutzomyia hartmanni
(Fairchild & Hertig, 1957)

Annals of the Entomological Society of America, 50(4): 325-334.

Examined material label information: *Phlebotomus hartmanni* Fairchild & Hertig. **Paratype:** 1♂ || Cerro Campana || Panama || Met. Shannon trap || Leg. Hertig, Fairchild & Galindo || Date Coll. 02-01-1951. **Paratype:** 1♀ || Cerro Campana || Panama || Met. light trap || Leg. Blanton || Date Coll. 04-24-1952.

Type-locality: Panama, Cerro Campana.

Geographical distribution: Mexico, Costa Rica, Panama, Colombia, Ecuador, Peru.

Lutzomyia sanguinaria
(Fairchild & Hertig, 1957)

Annals of the Entomological Society of America, 50(4): 325-334.

Examined material label information: *Phlebotomus sanguinarius* F. & H. **Paratype:** 1♂ || El Maria || Panama || Loc. Coll. tree trunk || Leg. R. & H. || Date Coll. 01-11-1950. **Paratype:** 1♀ || Cerro Campana || Panama || Shannon Trap || Leg. Fairchild & Hertig || Date Coll. 08-24-1950.

Type-locality: Panama, El Maria, Panama, Cerro Campana.

Geographical distribution: Honduras, Nicaragua, Panama, Colombia.

Additional note: Species belongs to the sanguinaria series. Specimen listed as a suspect vector of *Leishmania panamensis* (Akhoundi *et al.*, 2017).

Pressatia camposi
(Rodriguez, 1952)

Annals of the Entomological Society of America, 45(4): 505-528.

Examined material label information: *Phlebotomus acanthobasis* Fairchild & Hertig. **Paratype:** 1♂ || Juan Mina C.Z. || Panama || Met. Shannon trap || Leg. F.S. Blanton || Date Coll. 09-05-1951. **Paratype:** 1♀ || Mojinga, Swamp, C.Z. || Panama || Met. light trap || Leg. Hertig || Date Coll. 07-11-1951.

Type-locality: Panama, Juan Mina C.Z.; Panama, Mojinga Swamp, C.Z.

Geographical distribution: Nicaragua, Costa Rica, Panama, Colombia, Ecuador.

Additional note: *Phlebotomus acanthobasis* Fairchild & Hertig, 1952 is considered as a junior synonym of *P. camposi* (Fairchild & Hertig, 1958).

Pressatia dysponeta
(Fairchild & Hertig, 1952)

Annals of the Entomological Society of America, 45(4): 505-528.

Examined material label information: *Phlebotomus dysponetus* Fairchild & Hertig. **Paratype:** 1♂ || Pacora || Panama || Loc. Coll. animal burrow || Leg. Hertig || Date Coll. 08-13-1950. **Paratype:** 1♀ || Pacora || Panama || Loc. Coll. animal burrow || Leg. Hertig || Date Coll. 08-13-1950.

Type-locality: Panama, Pacora.

Geographical distribution: Costa Rica, Panama, Colombia, Venezuela, Ecuador, Brazil (Mato Grosso).

Additional note: The record for the state of Mato Grosso (Missawa & Maciel, 2007) is a possible identification error since it is a trans Andean species.

Pintomyia odax
(Fairchild & Hertig, 1961)

Annals of the Entomological Society of America, 54(2): 237-255.

Examined material label information: *Phlebotomus odax* Fairchild & Hertig. **Paratype:** 1♂ || Vale Lancetilla || Honduras || Met. in light || Co Leg. II. Hils || Date Coll.

11-19-1953. **Paratype:** 1♀ || Vale Lancetilla || Honduras || Met. in light || Leg. Hils || Date Coll. 09-16-1953.

Type-locality: Honduras, Vale Lancetilla.

Geographical distribution: Guatemala, Honduras, Nicaragua, Costa Rica, Panama, Venezuela, Guiana Francesa, Brazil (Rondônia, Acre, Maranhão).

Additional note: The record of *Pintomyia odax* may be incorrect for the state of Rondônia. The specimens are a newly described species named *Pintomyia fiocruzi* (Costa et al., 2020).

Pintomyia pia
(Fairchild & Hertig, 1971)

Annals of the Entomological Society of America, 54(2): 237-255.

Examined material label information: *Phlebotomus pius* Fairchild & Hertig. **Paratype:** 1♂ || Santa Clara || El Volcán || Chiriquí || Panama || Loc. Coll. tree trunks || Leg. Hartmann colls. || Date Coll. 08-11-1950. **Paratype:** 1♀ || Palo Santo || Chiriquí || Panama || Met. Shannon trap || Leg. Hartmann colls. || Date Coll. 03-23-1951.

Type-locality: Panama, Santa Clara, El Volcán, Chiriquí.; Panama, Palo Santo, Chiriquí.

Geographical distribution: Costa Rica, Panama, Colombia, Venezuela, Peru, Bolivia.

Additional note: Suspect vector of *Leishmania braziliensis* in Colombia (Maroli et al., 2013).

Trichopygomyia triramula
(Fairchild & Hertig, 1952)

Annals of the Entomological Society of America, 45(4): 505-528.

Examined material label information: *Phlebotomus triramulus* Fairchild & Hertig. **Paratype:** 1♂ || Cerro Campana || Panama || Loc. Coll. animal burrow || Date Coll. 07-04-1948. **Paratype:** 1♀ || La Victoria || Panama || Met. Shannon trap || Date Coll. 08-02-1950.

Type-locality: Panama, Cerro Campana, Panama, La Victoria.

Geographical distribution: Mexico, Belize, Guatemala, Costa Rica, Panama, Colombia, Ecuador.

Subtribe SERGENTOMYIINA

Micropygomyia duppyorum
(Fairchild & Trapido, 1950)

Annals of the Entomological Society of America, 43(3): 405-417.

Examined material label information: *Phlebotomus duppyorum* F. & H. **Paratype:** 1♂ || Stony Hill || Saint Andrew || Jamaica || Loc. Coll. tree trunk || Leg. GBF & HT || Date Coll. 05-22-1949. **Paratype:** 1♀ || Stony Hill || Saint Andrew || Jamaica || Loc. Coll. tree trunk and roots || Leg. GBF & HT || Date Coll. 05-25-1949.

Type-locality: Jamaica, Stony Hill, Saint Andrew.

Geographical distribution: Jamaica.

Micropygomyia ferreirana
(Barretto, Martins & Pellegrino, 1956)

Folia Clinica et Biologica, 26: 47-56.

Examined material label information: *Lutz. ferreirana* Bar., Mart., Pel., 1956. **Holotype:** 1♂ || Jampruca || Minas Gerais || Brazil || Met. in light || Leg. Barretto, Martins & Pellegrino || Date Coll. 10-1955. **Paratype:** 1♂ || Jampruca || Minas Gerais || Brazil || Loc. Coll. Tree hollow || Date Coll. 10-1955.

Type-locality: Brazil, Jampruca, Minas Gerais.

Geographical distribution: Peru, Brazil (Mato Grosso, Distrito Federal, Minas Gerais, Espírito Santo, Rio de Janeiro, São Paulo, Paraná, Mato Grosso do Sul, Rio Grande do Sul).

Micropygomyia longipennis
(Barretto, 1946)

Revista Brasileira de Biologia, 6: 427-434.

Examined material label information: *P. longipennis* sp. n. **Holotype:** 1♂ || Faz. Monjolinhos || Corumbá || Goiás || Brazil || Loc. Coll. Forest (during the day) || Leg. Barretto || Date Coll. 12-1945.

Type-locality: Brazil, Faz. Monjolinhos, Corumbá, Goiás.

Geographical distribution: Peru, Brazil (Roraima, Amazonas, Amapá, Pará, Rondônia, Tocantins, Maranhão, Acre, Minas Gerais, Rio de Janeiro, São Paulo, Paraná, Goiás, Mato Grosso, Mato Grosso do Sul, Distrito Federal).

Subtribe PSYCHODOPYGINA

Nyssomyia trapidoi
(Fairchild & Hertig, 1952)

Annals of the Entomological Society of America, 45(4): 505-528.

Examined material label information: *Phlebotomus trapidoi* Fairchild & Hertig. **Paratype:** 1♂ || Finca Nievecita || Almirante || Bocas, RP || Panama || Loc. Coll. tree trunk || Leg. Hartmann || Date Coll. 06-21-1950. **Paratype:** 1♀ || Finca Nievecita || Almirante || Bocas, RP || Panama || Loc. Coll. tree trunk || Leg. Quiñones || Date Coll. 06-02-1950.

Type-locality: Panama, Finca Nievecita, Almirante, Bocas, RP.

Geographical distribution: Guatemala, Honduras, Nicaragua, Costa Rica, Panama, Colombia, Ecuador.

Additional note: Suspect vector of *Leishmania (Viannia) panamensis* (Maroli et al., 2013; Dutari & Loaiza, 2014).

Nyssomyia ylephiletor
(Fairchild & Hertig, 1952)

Annals of the Entomological Society of America, 45(4): 505-528.

Examined material label information: *Phlebotomus ylephiletor* Fairchild & Hertig. **Paratype:** 1♂ || Finca Nievecita || Almirante || Bocas, RP || Panama || Loc. Coll. tree trunk || Leg. Hartmann || Date Coll. 06-22-1950. **Paratype:** 1♀ || Finca Nievecita || Almirante || Bocas, RP || Panama || Loc. Coll. tree trunk || Leg. Quiñones || Date Coll. 06-29-1951.

Type-locality: Panama, Finca Nievecita, Almirante, Bocas, RP.

Geographical distribution: Mexico, Belize, Guatemala, Honduras, Nicaragua, Costa Rica, Panama, Colombia, Ecuador.

Additional note: Suspected vector of *Leishmania (Viannia) panamensis* (Maroli et al., 2013; Dutari & Loaiza, 2014).

Psathyromyia aclydifera
(Fairchild & Hertig, 1952)

Annals of the Entomological Society of America, 45(4): 505-528.

Examined material label information: *Phlebotomus acydiferus* Fairchild & Hertig. **Paratype:** 1♂ || Juan Mina C.Z. || Panama || Loc. Coll. Tree with bats || Leg. Hertig, Galindo, Hartmann || Date Coll. 07-11-1951. **Paratype:** 1♀ || Mojinga Swamp C.Z. || Panama || Met. light trap || Leg. F.S. Blanton || Date Coll. 07-11-1951.

Type-locality: Panama, Juan Mina C.Z.; Panama, Mojinga Swamp C.Z.

Geographical distribution: Mexico, Belize, Honduras, Guatemala, Nicaragua, Costa Rica, Panama, Colombia, Ecuador, Bolivia.

Psathyromyia carpenteri
(Fairchild & Hertig, 1953)

Annals of the Entomological Society of America, 46(1): 21-34.

Examined material label information: *Phlebotomus carpenteri* Fairchild & Hertig. **Paratype:** 1♂ || Juan Mina

C.Z. || Panama || Met. light trap || Leg. Trapido || Date Coll. 10-29-1929. **Paratype:** 1♀ || Juan Mina C.Z. || Panama || Met. light trap || Leg. Trapido || Date Coll. 04-04-1950.

Type-locality: Panama, Juan Mina C.Z.

Geographical distribution: Mexico, Belize, Costa Rica, Panama, Colombia.

Psathyromyia cratifer
(Fairchild & Hertig, 1961)

Annals of the Entomological Society of America, 54(2): 237-255.

Examined material label information: *Phlebotomus cratifer* F. & H. **Paratype:** 1♂ || Palenque || Chiapas || Mexico || Loc. Coll. tree trunk || Leg. Fairchild, Hartmann || Date Coll. 04-02-1951.

Type-locality: Mexico, Palenque, Chiapas.

Geographical distribution: Mexico, Belize, Honduras, Costa Rica, Panama.

Psathyromyia runoides
(Fairchild & Hertig, 1953)

Annals of the Entomological Society of America, 46(1): 21-34.

Examined material label information: *Phlebotomus runoides* Fairchild & Hertig. **Paratype:** 1♂ || Mojinga Swamp || Panama || Met. light trap || Leg. F.S. Blanton || Date Coll. 09-05-1951. **Paratype:** 1♀ || Mojinga Swamp || Panama || Met. light trap || Leg. F.S. Blanton || Date Coll. 09-05-1951.

Type-locality: Panama, Mojinga Swamp.

Geographical distribution: Costa Rica, Panama, Colombia, Ecuador, Peru, Brazil (Roraima, Amazonas, Acre, Rondônia, Tocantins, Minas Gerais, Mato Grosso).

Additional note: The male and female *Psathyromyia runoides* were redescribed by Costa et al. (2021) from the paratypes deposited at the MZUSP.

Psathyromyia undulata
(Fairchild & Hertig, 1950)

Annals of the Entomological Society of America, 43(3): 523-533.

Examined material label information: *Phlebotomus undulatus* F. & H. **Paratype:** 1♂ || Ocosocoautla || Chiapas || Mexico || Loc. Coll. tree trunk || Leg. Fairchild, Hartmann || Date Coll. 04-08-1951. **Paratype:** 1♀ || Ocosocoautla || Chiapas || Mexico || Loc. Coll. tree trunk || Leg. Fairchild, Hartmann || Date Coll. 04-08-1951.

Type-locality: Mexico, Ocosocoautla, Chiapas.

Geographical distribution: Mexico, Guatemala, Belize, Honduras, El Salvador, Costa Rica, Panama.

Psychodopygus bispinosus
(Fairchild & Hertig, 1951)

Annals of the Entomological Society of America, 44(3): 399-421.

Examined material label information: *Phlebotomus bispinosus* Fairchild & Hertig. **Paratype:** 1♂ || La Victoria || Panama || Met. Shannon trap || Leg. M. Hertig || Date Coll. 08-29-1950. **Paratype:** 1♀ || La Victoria || Panama || Met. Shannon trap || Leg. M. Hertig || Date Coll. 08-29-1950.

Type-locality: Panama, La Victoria.

Geographical distribution: Mexico, Belize, Honduras, Guatemala, Nicaragua, Costa Rica, Panama, Suriname, Colombia, Guiana Francesa, Ecuador, Brazil (Amapá, Amazonas, Pará, Acre, Rondônia, Bahia, Mato Grosso).

Psychodopygus matosi
(Barreto & Zago, 1956)

Revista Brasileira de Entomologia, 5: 177-186.

Examined material label information: *Lutz. matosi* Barreto & Zago, 1956. **Holotype:** 1♂ || Itaipava || Petrópolis || Rio de Janeiro || Brazil || Met. in light || Leg. Deane & Mattos || Date Coll. 05-09-1950. **Paratypes:** 4♂♂ || Itaipava || Petrópolis || Rio de Janeiro || Brazil || Met. in light || Leg. Deane & Mattos || Date Coll. 05-09-1950. **Paratypes:** 2♀♀ || Itaipava || Petrópolis || Rio de Janeiro || Brazil || Met. in light || Leg. Deane & Mattos || Date Coll. 05-09-1950.

Type-locality: Brazil, Itaipava, Petrópolis, Rio de Janeiro.

Geographical distribution: Brazil (Bahia, Minas Gerais, Espírito Santo, Rio de Janeiro).

Trichophoromyia adelsonsouzai
Santos, Silva, Barata, Andrade & Galati 2013

Memórias do Instituto Oswaldo Cruz, 109(2): 140-147.

Examined material label information: *Trichophoromyia adelsonsouzai* Santos, Silva, Barata, Andrade & Galati 2013. **Paratypes:** 3♂♂ || Pará || Vitória do Xingu between Altamira and Anapu (km 23 of the R. Transamazônica) || Brazil || Met. CDC; Shannon || Leg. Santos TV & Silva FMM. || Date Coll. 02-04-15-2012 e 07-10-26-2012 || Det. Andrade and cols. || Date ID 2013 || 3♀♀ || Pará || Vitória do Xingu between Altamira and Anapu (km 23 of the R. Transamazônica) || Brazil || Met. CDC; Shannon || Leg. Santos TV & Silva FMM. || Date Coll. 02-04-15-2012 e 07-10-26-2012 || Det. Andrade and cols. || Date ID 2013.

Type-locality: Brazil, Vitória do Xingu between Altamira and Anapu (km 23 of the R. Transamazônica) || Pará.

Geographical distribution: Brazil (Pará).

Trichophoromyia reburra
(Fairchild & Hertig, 1961)

Annals of the Entomological Society of America, 54(2): 237-255.

Examined material label information: *Phlebotomus reburrus* Fairchild & Hertig. **Paratype:** 1♂ || Tacarcuna || Darien || Panama || Met. Shannon trap || Leg. Quiñones e Galindo || Date Coll. 09-05-1958. **Paratype:** 1♀ || Tacarcuna || Darien || Panama || Loc. Coll. In forest || Leg. Galindo || Date Coll. 04/09/1958.

Type-locality: Panama, Tacarcuna, Darien.

Geographical distribution: Costa Rica, Panama, Colombia, Ecuador.

Trichophoromyia wagleyi
(Causey & Damasceno, 1945)

Memórias do Instituto Oswaldo Cruz, 42(1): 17-29.

Examined material label information: *Lutz. wagleyi* (Cau. & Dam., 1945). **Holotype:** 1♂ || São Paulo de Olivença || Amazonas || Brazil || Loc. Coll. Toca de tatu || Leg. Damasceno || Date Coll. 04-1943.

Type-locality: Brazil, São Paulo de Olivença, Amazonas.

Geographical distribution: Colombia, Venezuela, Bolivia, Brazil (Amazonas).

Note: *Lutz. breviducta* Barreto (1950) was described based in an single male designed as: holotype ♂ || Fazenda Jerusalém || Alegre || Espírito Santo || Brazil || Loc. Coll. in domicile || Leg. Zikan || Date Coll. not informed and material originally deposited in the "Faculdade de Ciências Farmacêuticas de Ribeirão Preto" (FCFRP) and incorporated in the MZUSP. However, this species was invalidated by Andrade et al. (2013), since this specimen is composed of parts of different species.

DISCUSSION

The collection of invertebrates at MZUSP is recognized as one of the greatest scientific collections in Brazil by presenting a wide diversity of species of the most diverse taxa and because of its historical character (Vivo et al., 2014). The Phlebotominae collection corresponds to 0.2% of the deposited insects, but it has 28% of the known sand fly species of the Americas. All type specimens are mounted in Canadian Balm. They are well preserved and body parts are visible, enabling specific

identification. Yet, it should be noted that the number of type-species could be greater, since, after verifying data from the slides of the species *Martinsmyia alphabetica*, *Evandromyia wilsoni*, *Brumptomyia cardosoi*, *Br. mangabeirai* we observed that the information corroborates with that contained in the literature describing the species. But without the designation of the authors on the slides, it is difficult to verify their status as part of the type-series. In the same situation, we found in the MZUSP collection specimens of *Br. travassossi* and *Pintomyia damascenoi* collected by Mangabeira-Filho (1941, 1942). We believe that these sand flies could be part of the collection of more than 30 specimens described by the author. The Mangabeira's collection was in the Entomological Collection of the Instituto Oswaldo Cruz (FIOCRUZ/CEIOC) but, until moment, it is lost (Andrade. AJ, personal communication). On the other hand, the MZSUP received some of the slides originally belonging to the USP Department of Medicine/Parasitology Standard Collection, an important collection set up and organized by Dr. Mauro Pereira Barreto, who for almost 60 years devoted himself to the study of sand flies (Shimabukuro & Galati, 2011; Andrade et al., 2013).

The species, listed in this catalogue present a wide distribution in the Americas. In Brazil, there are records of Phlebotominae in every state (Galati, 2018) and the occurrence of these insects in different regions can give indications of environmental quality, as well as information necessary for the study of the epidemiological aspects of leishmaniasis (Pereira-Júnior et al., 2019). The preservation of samples in collections could be essential in studies on the dynamics of a disease in a certain region. It is possible to utilize information on labels or in genetic material banks to evaluate the seasonal dynamics of vector species, to estimate the space-time distribution of the species and also analyze competence in the transmission of pathogens (Maggi & Krämer, 2019; Thompson et al., 2021).

Entomological repositories and collections are essential for the study of insect taxonomy and systematics, above all those of medical interest, since it is possible to consult the material and compare it with the original description to check the taxonomic status of the species, for example (Andrade et al., 2013, 2014). A consultation of type material already collected and catalogued becomes an interesting alternative for the study of vectors, since there is information on taxonomic aspects, taxonomic status of the specimen and the biogeography of a specimen or group, principally of those groups that are difficult to capture (Cranston, 2005). For example, the specimen *Phlebotomus breviductus* Barreto, 1950, which is in the MZUP's collection, after evaluation of the type material was ultimately invalidated by Andrade et al. (2013), thus showing the importance of constant revision of the material stored so as to discover occasional irregularities and correct them.

In this work was observed the presence of species and/or potential species that can transmit *Leishmania*, for example *Lutzomyia longipalpis*, which is the main species responsible for the transmission of *Leishmania*

(*Leishmania*) *infantum* (Lainson & Rangel, 2005). *Nyssomyia trapidoi* and *Ny. ylephiletor* are potential vectors of *Leishmania (Viannia) panamensis* (Maroli et al., 2013; Dutari & Loaiza, 2014). This demonstrates the importance of preserving this type of material to support taxonomic identifications of vector species and contribute to a better understanding of the eco-epidemiological aspects in the transmission chain of leishmaniasis (Thompson et al., 2021).

In addition to the role of preserving biodiversity, the collections can provide rapid access to samples which are important and once digitalized can facilitate the propagation of information (Balke et al., 2013; Beaman & Cellinese, 2012; Hedrick et al., 2020), and promote the use of new analytical approaches to old samples to generate new knowledge, enabling more complex studies to be performed. One of the tools that can be used in studies of insects is the use of the DNA barcode to identify taxonomic specimens or groups. It is also possible to apply this type of approach in studies that involve the areas of ecology and conservation (Kress et al., 2015). The collections could thus be useful for conducting studies of taxonomic review of a specimen for example, since there is the possibility to compare deposited samples by studying vouchers and reference materials and re-use them with new research perspectives. (Camargo et al., 2015; SciColl, 2016).

For these reasons, scientific collections are indispensable in the preservation of natural history. The information contained can serve as a resource for the most diverse types of academic research, in addition to the possibility of being used for educational ends.

AUTHORS' CONTRIBUTIONS: MSC: Writing – original draft; SPCJ: Formal Analysis; VRA, PHFS, EABG, AJA: Data curation; VRA, SPCJ; PHFS, EABG, AJA: Writing – review & editing. All authors actively participated in the discussion of the results; they reviewed and approved the final version of the paper.

CONFLICT OF INTEREST: Authors declare there are no conflicts of interest.

FUNDING INFORMATION: This study was financed in part by the Coordenação de Aperfeiçoamento de Pessoal de Nível Superior – Brasil (CAPES) – Finance Code 001.

ACKNOWLEDGMENTS: The authors would like to thank Dr. Carlos José Einicker Lamas (Curator) and Camila Fernandes Conti for the access to the Phlebotominae slides of the University of São Paulo Museum of Zoology.
